HOW XEOMIN COSMETIC WORKS

Frown lines form when facial expressions cause the muscles under the skin to contract. Over time, as your skin ages, these repeated expressions cause lasting frown lines.

XEOMIN COSMETIC blocks the release of chemicals that cause these muscle contractions. Lines are softened and the skin appears smooth.

NATURAL LOOKING RESULTS THAT LAST

"After" photo taken 30 days after injection. Individual results may vary. Unretouched photos taken at maximum frown.

FREQUENTLY ASKED QUESTIONS

What treatment effects can I expect with XEOMIN COSMETIC and when?

All neuromodulators generally work in the same way to prevent muscle fibers from contracting. The active ingredient works on the nerve endings to reduce muscle activity, resulting in a softening of the frown lines and a relaxed, refreshed appearance.

The muscle relaxation is usually observed within 2 – 10 days, and the peak effect is reached in about 2 – 4 weeks. XEOMIN COSMETIC is clinically proven to last up to 4 months; however, every patient's treatment results will vary.^{1,5}

What can I expect when having a XEOMIN COSMETIC treatment?

A XEOMIN COSMETIC treatment is simple and fast — it's typically completed within 15 – 20 minutes. Your aesthetic healthcare professional will usually take some additional time before your treatment to discuss your expectations and treatment options.

During treatment, a very fine needle with a small amount of solution is injected into the muscles in your forehead that cause the frown lines between your brows. Any discomfort due to the injection is minimal and in most cases no anaesthetic is required.

What can I expect after having a XEOMIN COSMETIC treatment?

You can usually resume your daily activities immediately after treatment and gently wash your face or apply light makeup if desired.

What should I tell my healthcare provider before treatment?

Before receiving treatment with XEOMIN COSMETIC, you should tell your aesthetic healthcare professional about all your medical conditions, including those that affect your muscles and nerves. In addition, let them know if you have allergies to or have experienced side effects from any other neuromodulator treatment in the past.

You should also let your aesthetic healthcare professional know about any medicines you take, including prescription and non-prescription medicines, vitamins and herbal supplements.

For safety reasons, XEOMIN COSMETIC is not recommended during pregnancy and nursing. Do not use if you are allergic to botulinum toxin or any other ingredients in XEOMIN COSMETIC. Side effects are rare and generally not serious. Please discuss any risks with your aesthetic healthcare provider.

Will I look unnatural after my XEOMIN COSMETIC treatment?

In the hands of a skilled and experienced injector, XEOMIN COSMETIC can help you look rested and refreshed — still you, but rejuvenated. You and your aesthetic healthcare professional will agree on a plan to keep your expression natural and animated.

SAFETY INFORMATION

This brochure is provided to doctors as a patient education tool, for those patients who have been prescribed XEOMIN COSMETIC. Please do not distribute without the advice of a doctor.

XEOMIN COSMETIC is used in adults for the temporary improvement in the appearance of moderate to severe frown lines. XEOMIN COSMETIC is incobotulinumtoxinA (purified neurotoxin free from complexing proteins). XEOMIN COSMETIC should only be given by a physician with the appropriate qualifications and experience in the treatment and the use of required equipment. XEOMIN COSMETIC should not be used if you are allergic (hypersensitive) to Botulinum neurotoxin type A or any of the other ingredients of XEOMIN COSMETIC; if an infection is present at the injection site; if you suffer from generalized disorders of muscle activity (e.g., myasthenia gravis, Eaton Lambert-Syndrome). Before you use XEOMIN COSMETIC, talk to your doctor or pharmacist if you suffer from any type of bleeding disorder; you receive substances that prevent the blood from clotting (anticoagulant therapy); you suffer from pronounced weakness or decreased muscle volume in the muscle where you will receive the injection; you suffer from a disease called amyotrophic lateral sclerosis; you suffer from any disease that disturbs the interaction between nerves and skeletal muscles (peripheral neuromuscular dysfunction); you have swallowing difficulties; if you have had problems with injections of Botulinum toxin type A in the past; or if you are due to have surgery. Tell your doctor if you are taking other medicines, especially aminoglycoside antibiotics which may increase the effect of XEOMIN COSMETIC. If you are pregnant or breastfeeding, XEOMIN COSMETIC should not be used. Side effects following treatment with XEOMIN COSMETIC are rare and are generally not serious. The most commonly reported side effects include headache, swelling around the eye, changes in the shape of the eyebrow, drooping of the eyelid and pain and bruising near the injection site. Seek immediate medical attention if swallowing, speech or respiratory problems arise. XEOMIN and XEOMIN COSMETIC contain the same active ingredient in the same formulation. Therefore adverse events observed with the use of XEOMIN also have the potential to be associated with the use of XEOMIN COSMETIC.

This is not a complete list of side effects. For any unexpected effects while taking XEOMIN COSMETIC, contact your treating healthcare provider.
